SUMMARY

Cloud & DevOps Engineer with 5+ years of experience architecting resilient, multi-cloud infrastructure across AWS, GCP, and Azure. Expert in modernizing legacy systems through containerization and managing complex Kubernetes ecosystems. Proven track record of accelerating software delivery by engineering robust, automated CI/CD pipelines.

EXPERIENCE

DevOps Engineer

CSI Global (HSBC)

November 2025 – Present, Hyderabad

- Led a 7-member engineering team to design and implement an end-to-end Prometheus/Grafana observability stack across Google Cloud Platform (GCP) and Internal Kubernetes Platform (IKP).
- Architected centralized monitoring for diverse infrastructure (K8s, PostgreSQL, Elasticsearch, Kafka, Zookeeper) and instrumented Pega applications with JMX sidecars for deep JVM-level insights.
- Built unified, single-pane-of-glass Grafana dashboards across complex environments (India, UK & China deployments), providing real-time visibility into Kubernetes cluster health and pod-level utilization to reduce MTTR.
- Streamlined CI/CD workflows by authoring custom Helm charts for the automated and reliable deployment of the entire monitoring infrastructure, including all exporters and sidecars.

DevOps Engineer

Mobikwik

April 2023 – October 2025, Gurgaon, HR

- Maintained and optimized Jenkins pipelines for seamless build, test, and deployment processes, ensuring smooth and efficient software releases.
- Managed multi-namespace staging and production environments on Amazon EKS, ensuring high availability and scalability.
- Onboarded new services to the EKS cluster via Terraform, streamlining the provisioning and configuration of resources.
- Implemented and maintained monitoring solutions using New Relic and Zabbix and integrated these tools with Pagerduty to proactively identify and resolve performance bottlenecks, latency issues and errors in applications and infrastructure.
- Conducted regular vulnerability assessments using Nessus, identifying and prioritizing security risks across the infrastructure.
- Leveraged AWS Systems Manager to automate patch management processes ensuring compliance with best practices.
- Built custom Grafana dashboards to monitor Nginx performance like request rate, error rate, upstream response time etc.
- Modernized application deployments by containerizing the EC2-hosted applications.
- Developed and implemented automation scripts to streamline routine tasks to improve efficiency and reduce manual efforts like app logs syncing to S3 bucket, nginx alerts, self-healing system, clearing disk space etc.

Cloud Engineer

Kanso Cloud

May 2021 – March 2023, RJ

- Elastic Load Balancers, CloudFront distributions, Security Hub, Route53 hosted zones etc.
- Reduced the average response time through automation of manual processes using Ansible modules.
- Created overall infra alerts using datadog and cloudwatch, leading to an improvement in the uptime of the services.
- Migrated applications from EKS to ECS Fargate to reduce infrastructure costs, optimizing resource allocation for various workloads.
- Managed the virtual desktop infrastructure (VDI) for 200+ users on the Element5 project using Amazon WorkSpaces.
- Acted as the single point of contact for troubleshooting issues in collaboration with the development team, overseeing application management within the VDI and configuring appropriate permissions to ensure security and functionality.
- Conducted root cause analysis for service downtimes through comprehensive investigations, enabling continuous development efforts and significantly reducing future incidents.

System Administrator

Infinity Ventures

October 2020 – April 2021, Remote

- Build and maintain servers running Windows and Linux
- Developed and maintained CI/CD pipelines via Jenkins
- Built and deployed Docker containers for implementing microservice architecture.
- Created bash scripts for building and deploying microservices.
- Configured reverse proxy load balancer using HAProxy.
- Used API testing tools like Postman and Newman to automate and execute the test cases.
- Hosted a static website on AWS S3 and managed S3 buckets and its policies.
- Setup CI/CD pipeline on AWS using AWS CodeCommit, CodeArtifact, CodeBuild, CodeDeploy, CodePipeline.

EDUCATION

B.Tech in Information Technology

Raj Kumar Goel Institute of Technology & Management • Ghaziabad, UP • 2016-2020

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Red Hat Certified System Administrator (RHCSA)

Red Hat Certified Specialist in Containers and Kubernetes (EX180)

SKILLS

AWS, Azure, GCP

Docker, Kubernetes, Ansible, Git, GitLab, Jenkins, Github Actions, Terraform, OpenShift

MySQL, MongoDB

Python, Shell Scripting

CloudWatch, Datadog, ELK Stack, Prometheus, Grafana, NewRelic, Zabbix

Kafka, Zookeeper, Pega, Jenkins, Tomcat, SentinelOne, nginx, IPA, loki, nessus, cloudflare
